The Reality: Drought, Climate Change + Resiliency

Conservation Is Critical

- Let's discuss the challenges around **water conservation**
-
- How can we realistically continue with **debt-servicing** if water sales go down without a **high-cost for ratepayers?**
-
- What are the realistic demand forecasts, given reality of CO River?

The Problem is Solvable

But we need to talk about it. And fund it.

- Media campaigns
- Change the ethic
- Drought is an opportunity for lasting improvements
- Turf Removal
- Rainwater Harvesting
- Greywater reuse

A man in a teal long-sleeved shirt is smiling and holding a tray of leafy green plants, likely lettuce, in a hydroponic greenhouse. The plants have long, fibrous roots hanging down. In the background, there are white water reservoirs and other trays of plants. The greenhouse has a wooden frame and a translucent covering.

Topics for Further Discussion

Price

- Can we discuss price models?
- **Is there an opportunity with federal funding?**

Wastewater

- Projects not owned by SDCWA
- Flow issues + recycling
